

Prophylaxis of VTE following Orthopedic Surgery

- The recommended dose of Fondaparinux Sodium Injection is 2.5 mg once daily administered post-operatively by subcutaneous injection.
- After hemostasis has been established, the initial dose should be given no earlier than 6 hours after surgical closure.
- The duration of prophylactic therapy with Fondaparinux Sodium Injection is 7 ± 2 days.
- In patients for whom extended prophylaxis is indicated, administration of Fondaparinux Sodium Injection in or out of the hospital up to an additional 24 days is recommended.
