

Fever with Rash: One of the First Presentations of COVID-19

Fever along with skin rashes are seen in 20% of the COVID-19 patients¹

Skin related symptoms could include: Abnormal red rashes, pain and itchy swelling on foot and chicken pox-like blisters²

Preventive measures during COVID-19

Avoid close contact with people who are sick because that would increase your chances of getting COVID-19⁵

Use a moisturizer to get relief from itching³

Do not self medicate !! Consult your doctor for proper treatment²

Drink plenty of water to avoid dehydration⁴
